

CSA0904 CO2 AT2 ASSESSMENT

Q1.Restaurant Digital Order Analyzer

The screenshot shows the SIMATS Online Programming Lab interface. The top navigation bar includes the SIMATS Engineering logo, the lab name, and the user's name (VASAMSETTI HARSHITHA). The left sidebar lists three questions: Q1 (Restaurant Digital Order Analyzer, 10 marks), Q2 (Inventory Product Search System, 10 marks), and Q3 (Railway Coach and Seat Parser, 10 marks). The main area displays Q1 details: a description of the problem (splitting an order string and counting items), a code editor with a Java solution, and an input/output section. The code splits the string "DOSA-3-IDLY-2-VADA-1" into an array and prints each item in uppercase along with the total count of items (3).

Q1 Restaurant Digital Order Analyzer 10 marks

A restaurant stores orders as DOSA-3-IDLY-2-VADA-1. Create a program that:

- Splits the order using `split()`
- Converts food names to uppercase using `toUpperCase()`
- Counts the number of ordered items using `length()`

Your Code

```
1 import java.util.*;
2 public class Main{
3     public static void main(String[] args){
4         String order="DOSA-3-IDLY-2-VADA-1";
5         String[] items=order.split("-");
6         for(int i=0;i<items.length;i+=2){
7             System.out.println(items[i].toUpperCase()+" "+items[i+1]);
8         }
9         System.out.println("Total ordered items:"+ (items.length/2));
10    }
11 }
```

Input

stdin input

Output

```
DOSA 3
IDLY 2
VADA 1
Total ordered items:3
```

Q2.Inventory Product Search System

The screenshot shows the SIMATS Online Programming Lab interface for Q2. The left sidebar now shows Q1 and Q2 as answered. The main area displays Q2 details: a description of the problem (converting product names to lowercase, searching with `contains()`, and confirming exact matches with `equalsIgnoreCase()`), a code editor with a Java solution, and an input/output section. The code reads "Milk" from the input, converts it to lowercase, and prints "Found" and "Exact Match".

Q2 Inventory Product Search System 10 marks

A supermarket stores product names in different letter cases. Develop a program that:

- Converts product names to lowercase using `toLowerCase()`
- Searches a product using `contains()`
- Confirms exact matching using `equalsIgnoreCase()`

Your Code

```
1 import java.util.*;
2 public class Main{
3     public static void main(String[] args){
4         Scanner in=new Scanner(System.in);
5         String product=in.nextLine();
6         String search=in.nextLine();
7         String lower=product.toLowerCase();
8         System.out.println(lower);
9         if(lower.contains(search.toLowerCase()))
10            System.out.println("Found");
11        else
12            System.out.println("Not Found");
13        if(product.equalsIgnoreCase(search))
14            System.out.println("Exact Match");
15        else
16            System.out.println("Not Exact Match");
17    }
18 }
```

Input

Milk
milk

Output

```
milk
Found
Exact Match
```

Q3.Railway Coach and Seat Parser

The screenshot displays the SIMATS Online Programming Lab interface. The top navigation bar includes the SIMATS Engineering logo, the lab name, and the user's name (VASAMSETTI HARSHITHA) with a dropdown menu. The main content area is titled "Q3 Railway Coach and Seat Parser" and is worth 10 marks. The question text states: "Indian Railways stores ticket information as S5-43. Write a Java program that: Splits the value using split(), Extracts the coach number using substring(), Displays the coach type using charAt()". The "Your Code" section contains a Java program that implements these requirements. The "Input" field shows "S5-43", and the "Output" field shows the results: "Coach Type:S", "Coach Number:5", and "Seat Number:43". The bottom status bar shows the temperature (32°C), weather (Mostly clear), and the date (05-08-2026).

JAVA PROGRAMMING

Q3 Railway Coach and Seat Parser 10 marks

Indian Railways stores ticket information as S5-43. Write a Java program that:
Splits the value using split()
Extracts the coach number using substring()
Displays the coach type using charAt()

Your Code

```
1 import java.util.*;  
2 public class Main(  
3     public static void main(String[] args){  
4         Scanner in=new Scanner(System.in);  
5         String ticket=in.nextLine();  
6         String[] parts=ticket.split("-");  
7         String coach=parts[0];  
8         String seat=parts[1];  
9         char coachType=coach.charAt(0);  
10        String coachNumber=coach.substring(1);  
11        System.out.println("Coach Type:"+coachType);  
12        System.out.println("Coach Number:"+coachNumber);  
13        System.out.println("Seat Number:"+ seat);  
14    }  
15 }
```

Input
S5-43

Output
Coach Type:S
Coach Number:5
Seat Number:43

3/3 answered
