

1. MCMXCIV
2. MCMXCI
3. V
4. LZAIL
5. MCCDTIV

Your Code

```
1 import java.util.*;  
2 public class Main{  
3     public static void main(String[] args){  
4         Scanner sc = new Scanner(System.in);  
5         String a = sc.nextLine();  
6         if('a' == 'III'){  
7             System.out.println("3");  
8         }  
9     }  
10 }
```

Program Input (stdin)

III

Output

```

Level 3 — Hard (H) Roman — Control

Roman numerals are represented by seven different symbols: I, V, X, L, C, D and M.

Symbol	Value
I	1
V	5
X	10
L	50
C	100
D	500
M	1000

For example, 2 is written as II in Roman numeral, just two ones added together. 12 is written as XII, which is simply X + II. The number 27 is written as XXVII, which is XX + V + II.

Roman numerals are usually written largest to smallest from left to right. However, the numeral for four is not IIII. Instead, the number four is written as IV. Because the one is before the five we subtract it making four. The same principle applies to the number nine, which is written as IX. There are six instances where subtraction is used:

- I can be placed before V (5) and X (10) to make 4 and 9.
- X can be placed before L (50) and C (100) to make 40 and 90.
- C can be placed before D (500) and M (1000) to make 400 and 900.

Given a roman numeral, convert it to an integer.

Example:

Input: s = "III"

Output: 3

Testcase:1. LVIII

2. MCMXC

3. V

4. LXXII

Develop a code to Reverse and Add a Number until you get a Palindrome.

Sample Input If 7325 is input number, then 7325 (Input Number) + 5237 (Reverse Of Input Number) = 12562

12562 + 26521 = 39083

39083 + 38093 = 77176

77176 + 67177 = 144353

144353 + 353441 = 497794 (Palindrome)

Testcase: 1. 8765

2. -8765

3. 0

4. EIGHT FIVE

5. 87.57

Your Code

```
1 import java.util.*;  
2 public class Main{  
3     public static void main(String[] args){  
4         Scanner sc = new Scanner(System.in);  
5         int n = sc.nextInt();  
6         while(true){  
7             int temp = n;  
8             int rev = 0;  
9             while(temp > 0){  
10                 rev = rev * 10 + temp % 10;  
11                 temp = temp / 10;  
12             }  
13  
14             int sum = rev + n;
```

Program Input (stdin)

Enter input if required...

Output

497794
